

REV	Description	DATE	BY
A4A	Initial production Release.	11/19/2012	GC
A5	On the initial production release the processors were to be found incorrect as supplied by TI. Parts while marked AM3359 were actually AM3352. This revision uses the correct parts.	1/2/2013	GC
A5A	1. Deleted R29-R44 from the LCD lines. 2. Added 47pf capacitors C156-C173 to LCD data lines to ground. 3. Changed schematic revision to A5A. 4. Changed a few footprints after PCB update for above changes. 5. Added access point for the battery function of the TPS65217C. 6. Added Ferrite beads in series with LED power and 5V power rail of the USB host connector. Required to pass FCC/CE testing due to noise emissions on that pin. 7. Added power button to enable sleep, wakeup, power down and power up features on the system. 8. Added Modification to add 100K ohm resistor to ground to prvent crosstalk when serial cable is not plugged in.	2/8/2013	GC
A5B	1. Added 100K pulldown on J1 pin 4 to prevent crosstalk when serial cable is not connected into PCB layout. 2. Changed the LED resistors to 4.75K to lower the brightness.	5/21/2013	GC
A5C	1. Changed R46, R47,R48 to 0 ohms. 2. Changed R45 to 22 Ohms. Change was made due to production failures on some boards due to differences in impedances.	6/12/2013	GC
A6	1. Moved the enable for the VDD_3V3B regulator to VDD_3V3A rail. Change was made to reduce the delay between the ramp up of the 3.3V rails. 2. Added a AND gate to the SYS_RESETh circuitry. There is a small chance that on power up the nRESETOUT signal on the processor may go high, causing the SYS_RESETh signal to go HI before it should. This change reenforces the reset with the PORZn reset signal. 3. Added optional zero ohm resistor to tie GND_OSC0 to system ground.	7/25/2013	GC
A6A	1. Added optional zero ohm resistor to tie GND_OSC1 to system ground. 2. Changed C106 to a 1uF capacitor. 3. Changed C24 to a 2.2uF capacitor. 4. Made R8 installed and R9 not installed.	12/13/2013	GC
B	1. Changed the processor to the AM3358BZCZ100.	1/20/2014	GC
C	1. Increased the eMMC from 2GB to 4GB; The PCB revision for this board is Rev B6.	3/21/2014	GC
C3	1. Page 3: Added series resistor (R35,R36,R43,R44,R168-R173)=33R to the MMC1 lines. C175=DNI(10pF) to the MMC1_CLK to DGND; Changed C24 from 2.2uF to DNI. 2. Page 4: Changed USB1_VBUS series resistor from FB8=0.1R 0805 to R37=0R 0402. 3. Page 8: Connected the Pin A6 J5 of U13(eMMC IC) to DGND. 4. Page 9: Added AM3358 GPIO1_8 and a Positive-AND gate(U1) to reset ethernet LAN8710A; Added series resistor (R38-R42)=33R to the LAN8710A TX lines; Changed (C137-C140) from DNI to 10pF. 5. Page 11: Changed the MicroSD Connector from ALPS_SCHA5B0200 (EOL) to YU LIANG_YL004-030-001; Added series resistor (R2,R13,R15,R16,R31,R32)=33R and C5=DNI(10pF) to the MMC0 lines. 6. The PCB Revision for this board is RevC, BOM is RevC3.	4/1/2021	JQ.Xin
